The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (IGI). A laboratory grown diamond is a diamond that is chemically, physically and optically identical to a natural diamond, with the exception of being a manufactured product. This is a manufactured (man-made) diamond produced by CVD (chemical vapor deposition) or HPHT (high pressure high temperature) growth processes and may include post-growth treatments to alter the color. IGI employs and utilizes those techniques and equipment currently available to IGI, including, without limitation, 10X magnification, connected light loupe, binocular microscope, master color comparison stones, and/or procedures currently used by IGI. IGI utilizes a specialized measuring device, spectrophotometer and such other instruments and/or procedures as may be necessary to perform the grading and testing of the diamond and/or mounting, a random testing procedure, regarding the diamonds being of natural or laboratory created origin will be performed. This report includes advanced security features. A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and carat weight. THIS REPORT IS NEITHER A GUARANTEE, VALUATION, NOR APPRAISAL OF THE GEMSTONE DESCRIBED HEREIN. PLEASE REVIEW THE LIMITATIONS AND RESTRICTIONS SET FORTH ONLINE FOR THIS REPORT.
