The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or received by International Gemological Institute (IGI). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a natural diamond, but is produced by a controlled growth process (including, but not limited to, high pressure high temperature (HPHT) or chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes (manufactured product). This is a manufactured (non-natural) diamond produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post-growth treatments to alter the color. IGI employs and utilizes those techniques and equipment currently available to IGI, including, without limitation, 10X magnification, corrected triplet loupe, binocular microscope, master color comparison stones, non-contact-optical measuring device, Spectrophotometer and such other instruments, methods and procedures as may be necessary to properly identify, grade, test, analyze, examine and/or process a diamond. IGI does not provide a warranty regarding the accuracy of the laboratory credited origin will be performed. This Report includes advanced security features of and interrelationship between cut, color, clarity and carat weight. THIS REPORT IS NEITHER A GUARANTEE, VALUATION, NOR APPRAISAL OF THE GEMSTONE DESCRIBED HEREIN. PLEASE REVIEW THE LIMITATIONS AND RESTRICTIONS SET FORTH ONLINE FOR ADDITIONAL INFORMATION, IMPORTANT LIMITATIONS AND DISCLAIMERS. PLEASE GO TO WWW.IGI.ORG/TERMS.HTML OR CALL 1-888-801-4515.
