The laboratory grown diamond described in this Report (Report) has been graded, certified and insured by International Gemological Institute (IGI). A laboratory grown diamond is a diamond that is created in a controlled environment using high pressure high temperature (HPHT) or chemical vapor deposition (CVD) processes. IGI employs and utilizes those techniques and equipment currently available to IGI, including, without limitation, 10X magnification, computerized imaging, and other advanced technology. IGI uses a variety of measuring devices, including, without limitation, a spectrophotometer and such other measuring devices, and/or processes as deemed appropriate by IGI. This Report includes advanced security features. A duly accredited gemologist or jeweler can advise you with respect to the importance of and relationship between color, clarity, cut and carat weight.
