The laboratory grown diamond described in this report (Report) has been graded, tested, analyzed, examined and/or included by International Gemological Institute (IGI). A laboratory grown diamond is one that has been synthesized by the same chemical process (IGI) as naturally occurring diamonds. IGI employs various techniques and equipment currently available to IGI, including without limitation, 10X magnification, corrected triplet loupe, binocular microscope, master color comparison stones, non-contact optical instruments and/or processes as deemed appropriate by IGI. This report includes only the information that is necessary to describe the diamond and does not include a record of the performance of and interrelationship between cut, color, clarity and carat weight.
