The laboratory grown diamond described in the Report (Report) has been graded, tested, analyzed, examined and/or measured by International Gemological Institute (IGI). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man. Currently available to IGI, including without limitation, 10X magnification, certified light leakage, binocular microscope, master color comparison stones, non-contact optical measuring device, Diamond Sure™, Diamond View™, Spectrocolorimeter and such other instruments used in the grading process. IGI is not responsible for any damage to the diamond or any loss of value. A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and carat weight.
